

Generating Test Logs in Apache2

Once the files are entered into the system, we will go to the **Apps** section of Splunk, then the **Search & Reporting** tab to the left.

I will need to run **index=main** in the search bar

To generate some logs, I will search using the <http://localhost/> to search using the apache2 page.

As we drill into an event, we can see that I tried to search for **google** and got a 404 error
